About Me

My name is Fatemeh. I am a creative full-stack developer, currently based in Philadelphia who used to be a research assistant. I have a Bachelor's of Cellular & Molecular Biology (Microbiology) and a Master of Biotechnology. Besides coding, I also love designing, singing, painting, meditating & working out. I used to teach biology courses to college students & supervise their work in the laboratory. Our laboratory's focus was on rare dermatology conditions that were caused by mutation in different parts of a patient's genes and our main goals were to find out what causes these conditions to find a potential drug. My job requires a lot of calculations and working with cells, animals, DNA, RNA & protein. And the story of me deciding to become a full stack developer starts like this: One day, I watched a video about html and css. I downloaded VS-Code and started a mini project and when I saw the result in the live server, I fell in love! I love design and problem-solving. And I know when you really love what you do, you are not actually working, it is fun, satisfaction and happiness! That was when I decided to register for UPENN Bootcamp to become a full-stack developer.

SKILLS

Analyzing a situation or problem in depth and detail, being able to think outside of the box in creative ways, being a critical thinker and a great decision-maker, being an active listener and communicator with honesty and respectfully, a great team player and collaborator who has customer service skills as well.

- HTML5
- CSS3
- Bootstrap
- Javascript
